

FROM OLD RELIABLE

THE RENOWNED RAPID-AIR FEED

For almost half a century, the stamping industry has relied on Rapid-Air. Rapid-Air pioneered the first, original compact air feed with internal air circuitry which revolutionized the stamping industry, minimizing job set-up time and offering cost-effective versatility and reliability. The Rapid-Air feed is a timeless design as appropriate in today's modern stamping operations as it was back in 1959.

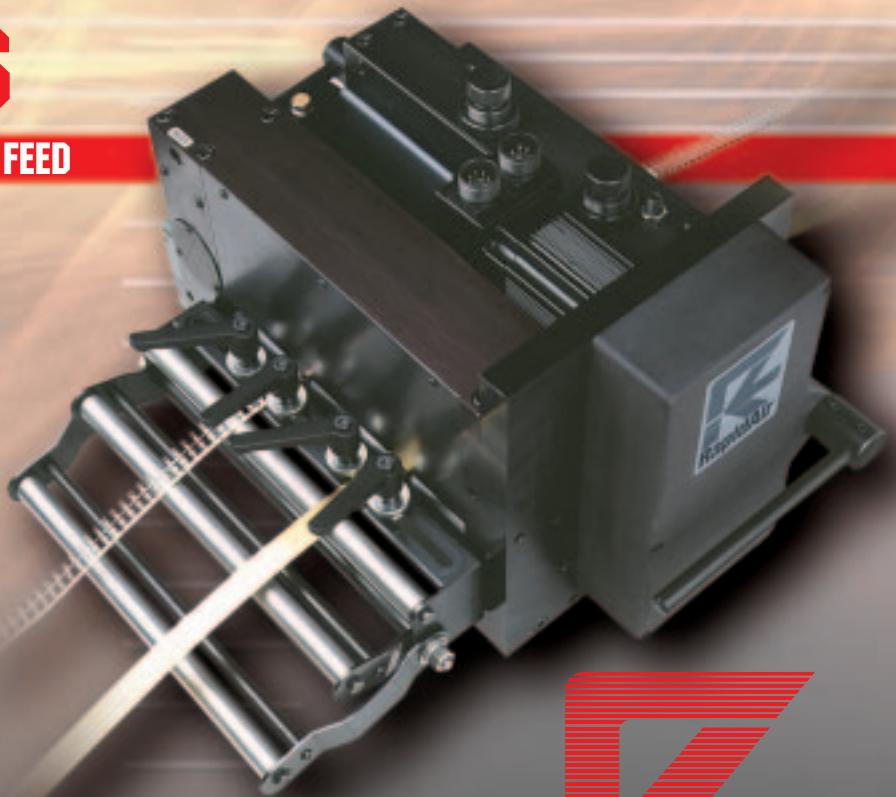

TO NEW PERFORMANCE INNOVATIONS

NEW RAPID-AIR DUAL STRIP SERVO FEED

Today, Rapid-Air continues to set the standard for performance and innovation with another first in its machine class and price range.

Introducing our Dual Strip Servo Feed, a Rapid-Air design which allows an operator to feed two differing strips of material at the same time, with separate, exacting control. Both upper rolls are driven by an independent gear box, in sync with the lower roll, gripping materials of varied thicknesses with incredible accuracy. You'll achieve higher speeds, less material marring and drastically increased production rates.

Still true today as it has been for generations, when you want optimum productivity and lifelong performance from your feeding and coil handling equipment, the name to rely on is Rapid-Air.

THE MOST RELIABLE FEEDING & COIL HANDLING EQUIPMENT MADE

Put our wealth of applications experience to work for you today to provide the complete solutions you need.
