

INTRODUCING THE NEW MODEL TC3 RAPID-AIR TRANSPORTER

PRECISION DESIGNED AND BUILT WITH THE SAME RUGGED RELIABILITY AS OUR RAPID-AIR FEEDS

The Rapid-Air Model TC3 Transporter quickly shuttles off parts with its fast, crisp tray action for significantly less cost than traditional conveyors. Its low profile design fits easily under the die, and incorporates the same, incredibly reliable Rapid-Air technology as our world-famous air feeds. Precision designed and ruggedly constructed for lasting performance, the TC3 is actually priced lower than other transporters on the market and requires minimal maintenance. The unit eliminates costly refurbishment sometimes associated with higher wear, nylon piston type designs and can be easily disassembled in minutes for replacement of low cost wear items, should the need ever arise. And since all Rapid-Air products are manufactured in the U.S., our parts availability is unmatched.

Able to accept higher air pressures for heavier loads, the TC3 operates from 20 to 80 psi and easily moves 10 lbs. at 40 psi. Unlike some models with adjustment screws located in front of the moving tray, the Rapid-Air transporter is easily accessed on the side for fine tuning during operation. Special shuttle trays, tray surfaces and support accessories are available. Contact us today for more information.
